

■ Intuitive navigation and softkeys

- „Easy Set-up“ guides the operator step by step through the menu to set parameters as quickly as possible. With the softkey functionality, the configuration is as simple as using a mobile phone

■ Through-the-glass control

- Assures access to the meter without the need to remove the cover

■ State-of-the-art diagnostics and simplified troubleshooting

- Monitors the meter's operability and the process. Alarms and warnings are classified in accordance with NAMUR NE107. During alarm conditions the display indicates actions required

■ High accuracy

- Higher excitation frequency combined with advanced filtering leads to an accuracy up to 0.2 %

■ Common electronic

- Lowers inventory costs and number of spare parts

■ Data stored inside the sensor

- This leads to increased speed of start-up and eliminates the opportunity for errors

■ Backwards compatible

- Existing FXE4000 installations can be upgraded to the latest technology using the ProcessMaster transmitter with the existing installed sensor

The first choice for all industry applications

The Company

We are an established world force in the design and manufacture of instrumentation for industrial process control, flow measurement, gas and liquid analysis and environmental applications. As part of ABB, a world leader in process automation, we offer customers application expertise, service and support worldwide. We are committed to teamwork, high quality manufacturing, advanced technology and unrivalled service and support. The quality, accuracy and performance of the company's products result from over 100 years experience, combined with a continuous program of innovative design and development to incorporate the latest technology. Over ten flow calibration plants are operated by ABB, which is indicative of our dedication to quality and accuracy.

Introduction

Setting the Standard

ProcessMaster is designed specifically for the process industry. It meets the stringent demands for enhanced metering, allowing more efficient and cost effective operation and compliance with increasing requirements.

ProcessMaster's modular design offers the industry's widest range of liners, electrodes and sizes to meet the needs of even the most demanding applications.

State-of-the-art Diagnostics and Simplified Troubleshooting

ProcessMaster monitors its own operability and your process.

The diagnostic parameters can be set to a limit value and an alarm can be activated as soon as the limit is exceeded.

The infrared port makes the export of recorded data for further analysis and evaluation very easy. This enables the identification and elimination of critical factors at an early stage. As a result, the process can be optimized for greater productivity and less downtime.

In accordance with NAMUR NE107, alarms and warnings are classified with the status classifications such as 'maintenance required,' 'function check,' 'failure,' and 'outside of specification.'

In an alarm situation, the display simplifies troubleshooting by indicating the steps to be taken to solve the problem.

Superior control through advanced sensor design

Revolutionary self-cleaning and double sealed electrodes enhance reliability and performance. Using a higher excitation frequency combined with advanced filtering, ProcessMaster improves accuracy by separating the noise from the electrode signal. This leads to an accuracy of up to $\pm 0.2\%$.

All Data is stored in the right place – the Sensor

Advanced data storage inside the sensor eliminates the need to match sensor and transmitter in the field. The on-board sensor memory eliminates the opportunity for errors.

On initial installation, the self-configuration sequence automatically replicates all data into the transmitter leading to increased speed of start-up. The redundant data in both the sensor and the transmitter memory is continually updated during all operations to ensure total integrity of the measurement.

Intuitive navigation and configuration

The user-friendly interface allows quick and simple data entry for all parameters. „Easy Set-up“ guides the operator step-by-step through the menu to set parameters as fast as possible, thereby simplifying the commissioning phase.

With the softkey functionality, the configuration is as simple as using a mobile phone.

Powerful and flexible transmitter

The backlit, graphical display can be easily rotated through 270 degrees without the need for any tools.

'Through-the-glass' control allows access to the meter in hazardous areas without the need to remove the cover.

The ABB universal Human Machine Interface (HMI) simplifies operation, maintenance and training; thereby reducing cost of ownership and providing one common user experience.

All product versions utilize a common electronics cartridge to simplify installation and reduce the number of spare parts. The same cartridge is used in both integral and remote installations and features active/passive current and pulse outputs. Standard HART protocol enables online modification and monitoring of parameters.

ProcessMaster sets the standard for the process industry. The product line meets the various requirements of NAMUR, such as NE21, NE43, NE70, NE80...

ProcessMaster is a universal device according to the pressure equipment directive.

In compliance with the requirements of NAMUR, the devices are categorized under category III for pipelines. This means that they can be used anywhere. This reduces inventory stock costs and increases safety.

Assured Quality

ProcessMaster is designed and manufactured in accordance with international quality procedures (ISO 9001) and all flowmeters are calibrated on nationally-traceable calibration rigs to provide the end-user with complete assurance of both quality and performance of the meter.

1 ProcessMaster - Technical data at a glance

Model Overview					
Complete Systems		Separate Components			
FEP311	FEP321	FEP381	FET321	FET301	
					
G00487	G00488	G00489	G00490	G00491	
		Sensor only	Transmitter only	Electronic only	

Model number	FEP311, FEP321
Accuracy	Standard: 0,4 % of rate Option: 0,2 % of rate
Size	3 ... 2000 [1/10 ... 80"]
Process Connection	Flange according to DIN 2501/ EN 1092-1, ASME B16.5 / B16.47, JIS 10K
Pressure rating	PN 10...40, ASME CL 150, 300, 600
Liner	Hard/soft rubber, PTFE, PFA, ETFE
Conductivity	> 5 µS/cm, (20 µS/cm for demineralized water)
Electrodes	SST 1.4571[316Ti], SST 1.4539 [904L] , Hastelloy B, Hastelloy C, Platinum-Iridium, Tantalum, Titanium
Process Connection Material	Carbon Steel, SST 1.4571 [316Ti]
Protection Class	IP 67, IP 68
Fluid Temperature	-25 ... 180 °C [-13 ... 356 °F]
Approvals	
EEx Design	ATEX / IEC Zone 2, 21 pending ATEX / IEC Zone 2, 22 pending FM /CSA Cl.1Div1,Div2 pending
Press. Equip. Dir. 97/23/EG	Conformity per category III, Fluid group 1
CRN (Canadian Reg.Number)	Upon request
Converter	
Supply Power	AC 100 ... 230 V (-15/+10 %), AC 24 V (-30/+10 %), DC 24V (-30/+30 %)
Current Output	4 ... 20 mA active or passive
Pulse Output	Active pulse or passiv pulse, software configurable
Contact Output	Optocoupler, function software programmable
Contact Input	Optocoupler, function software programmable
Local Display	Graphical display, configurable
Housing	Integral mounted or field mounted
Communication	HART protocol (standard)

For Food and Pharmaceutical applications, please refer to the HygienicMaster datasheet

2 Performance specifications

2.1 Measuring accuracy

2.1.1 Reference conditions per EN 29104

Fluid temperatures	20 °C (68 °F) ± 2 K
Ambient temperature	20 °C (68 °F) ± 2 K
Supply power	Line voltage per name plate Un ± 1 %, Frequency f ± 1 %
Installation conditions	- Upstream >10 x DN straight section. - Downstream >5 x DN straight section.
Warm up phase	30 min

2.1.2 Maximum measurement error

Pulse output

- Standard calibration; 0.4 % of rate:
± 0.4 % of rate ± 0.02 % of Qmax_{DN}
- Optional calibration; 0.2 % of rate:
± 0.2 % of rate ± 0.02 % of Qmax_{DN}

For Qmax_{DN} refer to table in chapter Flowmeter sizes, Flow range

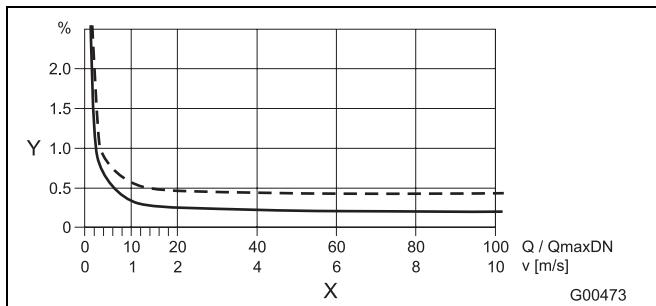

Fig. 1

Y Accuracy ± of rate in [%]

X Flow velocity v in [m/s]

Q / Qmax_{DN} [%]

Analog output effects

Same as pulse output plus ± 0.1 % of rate + 0.01 mA.

2.2 Repeatability, Response time

Reproducibility	≤ 0.11 % of rate t _{mess} = 100 s, v=0,5 ... 10m/s
Response time	For a step change 0 ... 99 % (corresponds to 5 τ) ≥ 200 ms at 25 Hz excitation frequency

2.3 Flowmeter sizes, Flow range

Meter size		Min. Flow range 0 ... ≈ 0.2 m/s	Qmax _{DN} 0 ... ≈ 10 m/s
DN	"		
3	1 / 10	0,08 l/min (0,02 US gal/min)	4 l/min (1,06 US gal/min)
4	5 / 32	0,16 l/min (0,04 US gal/min)	8 l/min (2,11 US gal/min)
6	1 / 4	0,4 l/min (0,11 US gal/min)	20 l/min (5,28 US gal/min)
8	5 / 16	0,6 l/min (0,16 US gal/min)	30 l/min (7,93 US gal/min)
10	3 / 8	0,9 l/min (0,24 US gal/min)	45 l/min (11,9 US gal/min)
15	1 / 2	2 l/min (0,53 US gal/min)	100 l/min (26,4 US gal/min)
20	3 / 4	3 l/min (0,79 US gal/min)	150 l/min (39,6 US gal/min)
25	1	4 l/min (1,06 US gal/min)	200 l/min (52,8 US gal/min)
32	1 1/4	8 l/min (2,11 US gal/min)	400 l/min (106 US gal/min)
40	1 1/2	12 l/min (3,17 US gal/min)	600 l/min (159 US gal/min)
50	2	1,2 m ³ /h (5,28 US gal/min)	60 m ³ /h (264 US gal/min)
65	2 1/2	2,4 m ³ /h (10,57 US gal/min)	120 m ³ /h (528 US gal/min)
80	3	3,6 m ³ /h (15,9 US gal/min)	180 m ³ /h (793 US gal/min)
100	4	4,8 m ³ /h (21,1 US gal/min)	240 m ³ /h (1057 US gal/min)
125	5	8,4 m ³ /h (37 US gal/min)	420 m ³ /h (1849 US gal/min)
150	6	12 m ³ /h (52,8 US gal/min)	600 m ³ /h (2642 US gal/min)
200	8	21,6 m ³ /h (95,1 US gal/min)	1080 m ³ /h (4755 US gal/min)
250	10	36 m ³ /h (159 US gal/min)	1800 m ³ /h (7925 US gal/min)
300	12	48 m ³ /h (211 US gal/min)	2400 m ³ /h (10567 US gal/min)
350	14	66 m ³ /h (291 US gal/min)	3300 m ³ /h (14529 US gal/min)
400	16	90 m ³ /h (396 US gal/min)	4500 m ³ /h (19813 US gal/min)
450	18	120 m ³ /h (528 US gal/min)	6000 m ³ /h (26417 US gal/min)
500	20	132 m ³ /h (581 US gal/min)	6600 m ³ /h (29059 US gal/min)
600	24	192 m ³ /h (845 US gal/min)	9600 m ³ /h (42268 US gal/min)
700	28	264 m ³ /h (1162 US gal/min)	13200 m ³ /h (58118 US gal/min)
760	30	312 m ³ /h (1374 US gal/min)	15600 m ³ /h (68685 US gal/min)
800	32	360 m ³ /h (1585 US gal/min)	18000 m ³ /h (79252 US gal/min)
900	36	480 m ³ /h (2113 US gal/min)	24000 m ³ /h (105669 US gal/min)
1000	40	540 m ³ /h (2378 US gal/min)	27000 m ³ /h (118877 US gal/min)
1050	42	616 m ³ /h (2712 US gal/min)	30800 m ³ /h (135608 US gal/min)
1100	44	660 m ³ /h (3038 US gal/min)	33000 m ³ /h (151899 US gal/min)
1200	48	840 m ³ /h (3698 US gal/min)	42000 m ³ /h (184920 US gal/min)
1400	54	1080 m ³ /h (4755 US gal/min)	54000 m ³ /h (237755 US gal/min)
1500	60	1260 m ³ /h (5548 US gal/min)	63000 m ³ /h (277381 US gal/min)
1600	66	1440 m ³ /h (6340 US gal/min)	72000 m ³ /h (317006 US gal/min)
1800	72	1800 m ³ /h (7925 US gal/min)	90000 m ³ /h (396258 US gal/min)
2000	80	2280 m ³ /h (10039 US gal/min)	114000 m ³ /h (501927 US gal/min)

Flowrange can be set between 0.2 m/s and 20 m/s (2 x Qmax_{DN})

3 Functional specifications

3.1 Sensor

3.1.1 Protection class per EN 60529

IP 67

IP 68 (only for remote flowmeter sensor)

3.1.2 Pipeline vibration following EN 60068-2-6

The following applies for integral design:
(sensor and transmitter all in one piece)

- In the range of 10 ... 58 Hz max. 0.15 mm deflection
- In the range of 58 ... 150 Hz max. 2 g acceleration

The following applies for remote design:

Transmitter

- In the range of 10 ... 58 Hz max. 0.15 mm deflection
- In the range of 58 ... 150 Hz max. 2 g acceleration

Flowmeter sensor

- In the range of 10 ... 58 Hz max. 0.15 mm deflection
- In the range of 58 ... 150 Hz max. 2 g acceleration

3.1.3 Laid length

The flanged flowmeters comply with the installation lengths defined in VDI/VDE 2641, ISO 13359 or DVGW (W420, Design WP, ISO 4064 short).

3.1.4 Signal Cable (remote design only):

Scope of delivery: 5 m.

If more than 5 m is required, the cable can be ordered under the order number D173D027U01.

Pre-amplifier:

Max. signal cable length between flowmeter sensor and transmitter:

a) without pre-amplifier:

- max. 50 m for conductivities $\geq 5 \mu\text{S/cm}$

For longer signal cable length a pre-amplifier is required

b) with pre-amplifier:

- max. 200 m for conductivities $\geq 5 \mu\text{S/cm}$

3.1.5 Temperature limitations

Storage Temperature:

- 20 °C ... 70 °C (-4 °F ... 158 °F)

Min. allow. pressure as a function of fluid temperature:

Liner	Meter size	P _{Operation} mbar abs.	at T _{Operation} *
Hard rubber	15 ... 2000 (1/2 ... 80")	0	< 90 °C (194 °F)
Soft rubber	50 ... 2000 (2 ... 80")	0	< 60 °C (140 °F)
PTFE KTW approved	10 ... 600 (3/8 ... 24")	270 400 500	< 20 °C (68 °F) < 100 °C (212 °F) < 130 °C (266 °F)
Thick PTFE Hightemp. design	25 ... 80 100 ... 250 300	0 67 27	< 180 °C (356 °F) < 180 °C (356 °F) < 180 °C (356 °F)
PFA	3 ... 200 (1/10 ... 8")	0	< 180 °C (356 °F)
ETFE	25 ... 1000 (1 ... 40")	100	< 130 °C (266 °F)

* Higher temperatures are allowed for CIP/SIP cleaning for limited time periods, see Table „Maximum allowable cleaning Temperature“.

Max. allowable cleaning Temperature:

CIP-Cleaning	Liner	T _{max}	T _{max-minutes}	T _{Amb.}
Steam cleaning	PTFE, PFA	150 °C (302 °F)	60	25 °C (77 °F)
Liquid cleaning	PTFE, PFA	140 °C (284 °F)	60	25 °C (77 °F)

If the ambient temperature is > 25°C, then the difference must be subtracted from the max. cleaning temperature. T_{max} - Δ °C. Δ °C = T_{Amb.} - 25 °C.

Allowable ambient temperature as a function of fluid temperature:**Integral mount (Model FEP311), Standard temperature design**

Liner	Flangematerial	Ambient temperature		Fluid temperature	
		min. temp.	max. temp.	min. temp.	max. temp.
Hard-rubber	Steel	-10 °C (14°F)	60 °C (140 °F)	-10 °C (14°F)	90 °C (194 °F)
Hard-rubber	Stainless steel	-15 °C (5 °F)	60 °C (140 °F)	-15 °C (5 °F)	90 °C (194 °F)

3.1.6 Pressure limitations, Material load

Limits for the allowable fluid temperature (TS) and allowable pressure (PS) are a function of the liner and flange materials of the flowmeter (see instrument name plate).

DIN-Flange SS 1.4571 [316Ti] to DN 600 (24")

3.2 Transmitter

3.2.1 Electrical specifications

Supply power	AC: 100 ... 230 V (- 15/+10 %) AC: 24 V (- 30/+10 %) DC: 24 V (- 30/+30 %), ripple: < 5 %
Supply frequency	47 ... 64 Hz
Magnetic field supply	6½ Hz, 7½ Hz 12½ Hz, 15 Hz, 25 Hz, 30 Hz (50/60 Hz Power supply)
Power consumption	S ≤ 20 VA (Sensor and transmitter)
Ambient temperature	-20 ... 60 °C (-4 ... 140 °F) Standard -40 ... 60 °C (-40 ... 140 °F) Extended
Storage temperature	-20 ... 70 °C (-4 ... 158 °F)
Protection Class of transmitter housing	IP 67
Electrical connections	Screw terminals

3.2.2 In- / outputs

Isolation in- / outputs

The current output, Digital output DO1 and DO2 and Digital input are isolated from the flowmeter sensor circuit/ input circuit and from each others.

Empty pipe detection

The "empty pipe detection" requires:
conductivity ≥ 20 µS/cm , signal cable length ≤ 50m, DN ≥ DN 10

3.2.3 Interconnection diagram

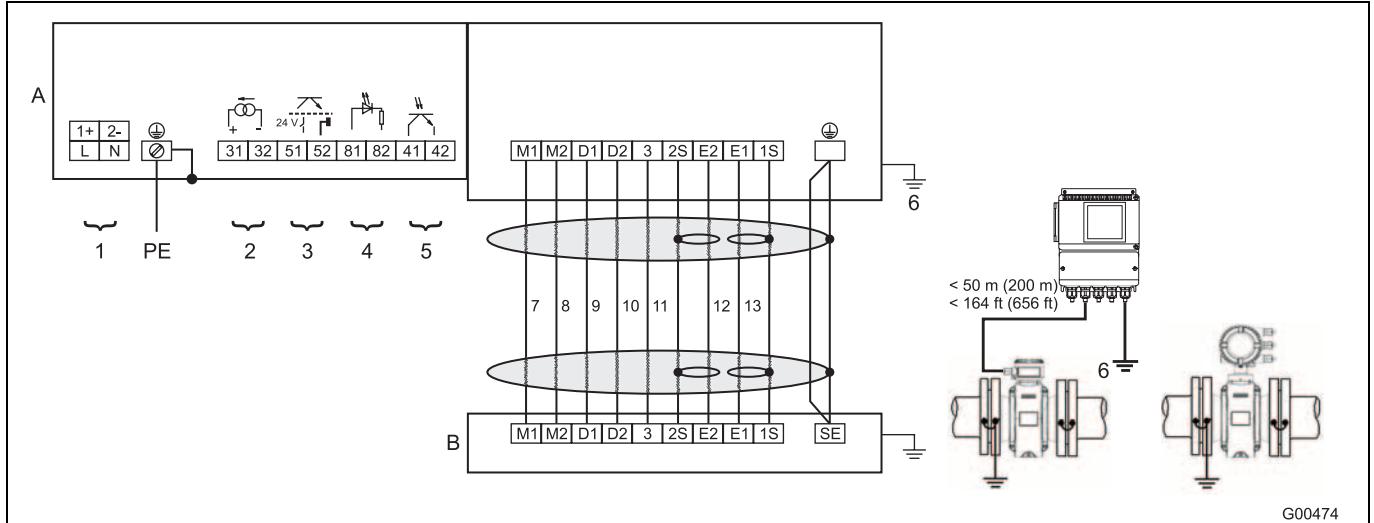

Fig. 8

A **Transmitter**B **Flowmeter sensor**1 **Supply Power:**

See name plate

2 **Current output (Terminals 31 / 32)**

Output can be set to either "active" or "passive" configuration on site.

- Active: 4 ... 20 mA, HART protocol (standard), Load: $\leq 650 \Omega$
 - Passive: 4 ... 20 mA, HART protocol (standard), Load: $250 \Omega \leq R \leq 650 \Omega$
- Supply voltage for the 20mA signal: min. 17V, max. 30 V

3 **Digital output DO2 (Terminals 41 / 42) (pulse output / contact output)**

The function is software selectable (pulse output or contact output).

Factory Default: "Contact output", Flow direction Indication

The Output is always a "passive" output configuration (Optocoupler).

Optocoupler specifications: $U_{max} = 30 V$, $I_{max} = 220 mA$, $f_{max} \leq 5250 Hz$ 4 **Digital output DO1 (Terminals 51 / 52) (pulse output / contact output)**

The function is software selectable (pulse output or contact output).

Factory Default: "Pulse output". Setting this output to "active" or "passive" configuration is software selectable.

- Configured as a pulse output
max. Pulse frequency: 5250 Hz.
Pulse width: 0.1 2000 ms.
Pulse factor and pulse width depend on each others. They are calculated dynamically.
- Configured as a contact output
Function: System monitoring, Empty Pipe, max./min. Alarm, Flow direction indication
- Output set to "active" configuration
 $U = 19 \dots 21 V$, $I_{max} = 220 mA$, $f_{max} \leq 5250 Hz$
- Output set to "passive" configuration
 $U_{max} = 30 V$, $I_{max} = 220 mA$, $f_{max} \leq 5250 Hz$

5 **Digital input (Terminals 81 / 82) (contact input)**

Function is software selectable:

External zero return, External totalizer reset, External totalizer stop, others

Optocoupler specifications: $16 V \leq U \leq 30 V$, $R_i = 2 k\Omega$ 6 **Functional ground**

7 = brown, 8 = red, 9 = orange, 10 = yellow, 11 = green, 12 = blue, 13 = violet

3.3 Physical Specification

3.3.1 Sensor

Wetted parts

Part	Standard	Options
Liner	PTFE, PFA, ETFE, Hardrubber, Softrubber	–
Signal and ground electrodes for:		
- Hard rubber	SST 1.4571 [316Ti]	Hastelloy B-3 (2.4600), Hastelloy C-4 (2.4610), Titanium, Tantalum, Platinium-Iridium, 1.4539 [904L]
- Soft rubber		
- PTFE, PFA, ETFE	SST 1.4539 [904L]	SST 1.4571[316Ti] Hastelloy C-4 (2.4610) Hastelloy B-3 (2.4600) Titanium, Tantalum, Platinium-Iridium
Ground ring	SST 1.4571 [316Ti]	Upon request
Protection ring	SST 1.4571 [316Ti]	Upon request

Non-wetted parts

	Standard	Options
Flange		
DN 3 ... 15 (1/10 ... 1/2")	SST 1.4571 [316Ti] (standard)	
DN 20 ... 400 (3/4 ... 16")	Steel (Zink plated)	
	DIN/EN flanges: RST37/ST52/C22-8	SST 1.4571[316Ti]
	ASME flanges: A105/C21	
DN 450 ... 2000 (18 ... 80")	Steel (painted)	
	DIN/EN flanges: RST37/ST52/C22-8	SST 1.4571[316Ti]
	ASME flanges: A105/C21	

Sensor housing material

	Standard	Options
Housing	Two-piece cast aluminum housing, painted, paint coat 60 µm thick, RAL 9002	–
DN 3 ... 400 (1/10 ... 16")		
DN 450 ... 2000 (18 ... 80")	Welded steel construction, painted, paint coat 60 µm thick, RAL 9002	–
Connection box	Cast alum., painted, 60 µm thick, frame: dark gray, RAL7012, cover: light gray, RAL 9002	–
Meter tube	SST 1.4301 [304]	–
Cable gland	Polyamide	–

3.3.2 Transmitter

Housing, color, cable gland

Integral design (Sensor and transmitter all in one piece)	
Housing	Cast aluminum housing, painted
Color	paint coat 60 µm thick; RAL 9002 light gray
Cable gland	Polyamide
Remote design (Transmitter separately mounted from Sensor)	
Housing	Cast aluminum housing, painted
Color	paint coat 60 µm thick, rear section RAL 7012 dark gray, front section (cover) RAL 9002 light gray
Cable gland	Polyamide
Weight	4,5 kg

4 Installation requirements

4.1 Grounding

The flowmeter sensor must be connected to ground potential. For technical reasons, this potential should be identical to the potential of the metering fluid.

For plastic or insulated lined pipelines, the fluid is grounded by installing ground plates. When there are stray potentials present in the pipeline, a ground plate is recommended on both ends of the meter sensor.

For flowmeter sensor with hardrubber liners, sizes DN 100/4" and larger, a conductive element is incorporated in the liner. This assures that the fluid is grounded.

4.2 Mounting

The following points must be observed for the installation:

- The meter tube must always be completely full.
- The flow direction must correspond to the identification if present.
- The maximum torque for all flange connections must be complied with. The max torque depends on the temperature, pressure, material of the flange bolts and gaskets and has to be chosen accordingly.
- The devices must be installed without mechanical tension (torsion, bending).
- Flowmeters with coplanar counter flanges may only be installed with suitable seals.
- Use flange seals made from a compatible material for the fluid and fluid temperatures.
- Seals must not extend into the flow area since possible turbulence could influence the device accuracy.
- The pipeline may not exert any unallowable forces and torques on the device.
- Do not remove the plugs in the cable connectors until you are ready to install the electrical cable.
- Install the separate converter at a largely vibration-free location.
- Do not expose the converter to direct sunlight or provide for appropriate sun protection where necessary.

4.2.1 Electrode axis

Electrode axis (1) should be horizontal if at all possible or no more than 45° from horizontal.

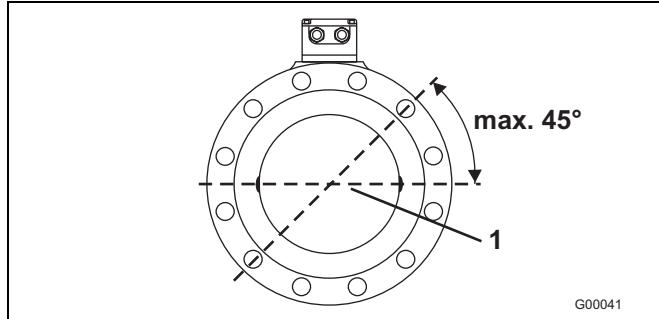

Fig. 13

4.2.2 In- and outlet pipe sections

Straight inlet section	Straight outlet section
$\geq 3 \times \text{DN}$	$\geq 2 \times \text{DN}$

DN = Flowmeter primary size

- Do not install fittings, manifolds, valves etc. directly in front of the meter tube (1).
- Butterfly valves must be installed so that the valve plate does not extend into the flowmeter primary.
- Valves or other turn-off components should be installed in the outlet pipe section (2).
- For compliance with the measuring accuracy, observe the inlet and outlet pipe sections.

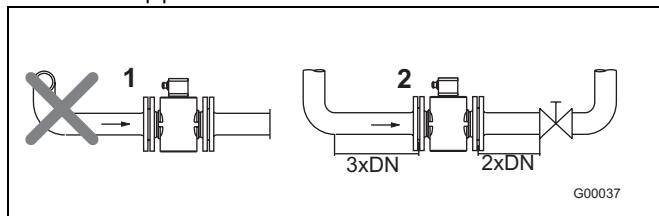

Fig. 14

4.2.3 Vertical connections

- Vertical installation for measurement of abrasive fluids, flow preferably from below to above.

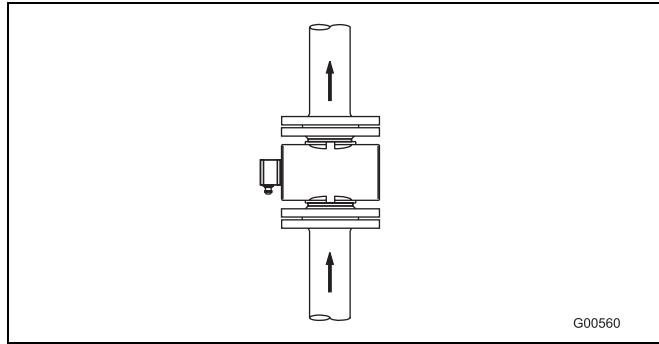

Fig. 15

4.2.4 Horizontal connections

- Meter tube must always be completely full.
- Provide for a slight incline of the connection for degassing.

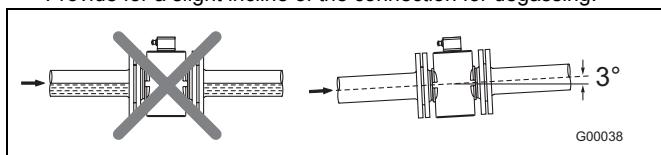

Fig. 16

4.2.5 Free inlet or outlet

- Do not install the flowmeter at the highest point or in the draining-off side of the pipeline, flowmeter runs empty, air bubbles can form (1).
- Provide for a siphon fluid intake for free inlets or outlets so that the pipeline is always full (2).

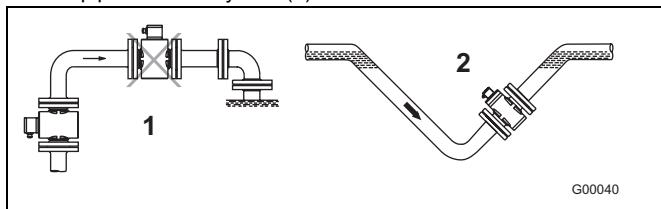

Fig. 17

4.2.6 Strongly contaminated fluids

- For strongly contaminated fluids, a bypass connection according to the figure is recommended so that operation of the system can continue to run without interruption during the mechanical cleaning.

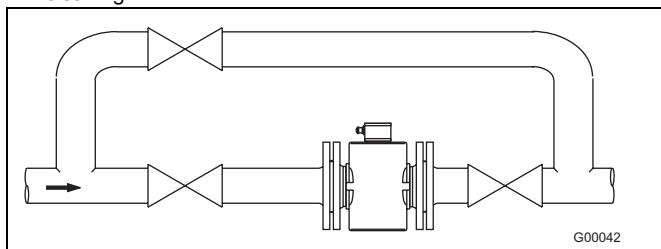

Fig. 18

4.2.7 Installation in the vicinity of pumps

- For flowmeter primaries which are to be installed in the vicinity of pumps or other vibration generating equipment, the utilization of mechanical snubbers is advantageous.

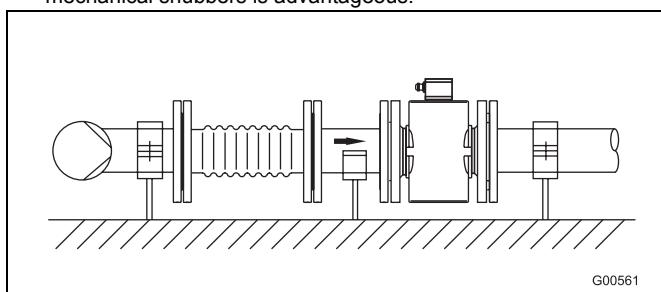

Fig. 19

- 1) Available only for meter size DN 3 ... 300 (1/10 ... 12 inch). The ProcessMaster sensor with hardrubber liner and sizes \leq DN100 (4inch) includes a conductive flag for grounding as a standard. Additional grounding electrodes are nor required.

2) Grounding plate, only possible for sensor size \leq DN 300 (12 in.) and PTFE / PFA lining.
